The Greater Hamilton Chamber of Commerce

A Case Study of Greater Productivity and IT Cost Savings

OneVue*x* is the backbone of our operation. We increased productivity by 40%... time that's now directed to members, generating more revenue...We're attracting new members and helping other chambers that are 10 times our size."

– Dan Bates, President and CEO

The GHCC deployed OneVue*x*, integrating Microsoft 365, Windows 10, SharePoint, Teams, and on-premises systems, increasing their computing power, boosting productivity, member satisfaction and income while reducing IT costs.

The GHCC had separate solutions like Office 365, on-premises, cloud and proprietary systems for accounting and membership. Finding information; collaborating internally or in the field with members; security and rising IT costs were major challenges. All impeded productivity, membership services and operations.

OneVue*x* integrated all computing solutions, providing the power and infrastructure needed, connecting on-premises systems with powerful cloud solutions, accessible from any device or OS with extended mobility and security, eliminating these challenges.

Now, employees can work directly with members in the community, delivering faster, more convenient services—at significantly lower costs, with fewer IT headaches and expense. Team members are more productive, accomplishing more in less time with greater collaboration.

The GHCC is 40% more productive, achieving greater efficiencies, professional presence and membership growth. Many IT services and unexpected IT events were eliminated. Security and mobility across all connected systems enabled superior service with confidence.
